

## **What**

International Border Code Book.

US Constitution introduction is the principal tool used to discuss the creation of US border security.

## **Where**

Find out about border vacancies, their dangers, and how more are being created on the US border. These vacancies, as the ones already created in the past, have actually made the border less safe. Read about vacancies at [bordercommerce.com](http://bordercommerce.com)

## **Who**

**bordercommerce.com** is a consulting company that wants to open up the discussion about real security for urban areas on the US border.

## **Why**

There is time and other options in securing the border which are more lasting and beneficial. What should result is good welfare and safety equal to what the rest of the Nation enjoys.

## **US Constitution introduction creates security guarantee for the US border.**

The opposition from City and County government and their citizens along the U.S. / Mexico border urban areas to building a fence comes from their sense that this is not true security.

All citizens and government officials want security but there should be no confusion that building a fence and its barrier to automobiles is “security,” absolutely.

A basic principal should be included in the discussion of security along the US borders and it is this principal that should guide our thoughts of how the meaning of security and its implementation should be carried out. The underlying principal is within the following paragraph and shall set the basic characterization of what is security and how it is implemented:

We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

Within this paragraph, we have all the elements of what people require to be free and secure. Our constitution provides it.

Give the border real security and not a metal graffiti blackboard for gangsters to mark their territory and call it security. The metal graffiti blackboard will create more vacancies (see [bordercommerce.com](http://bordercommerce.com) for explanation) as it already has done over the decades along the Rio Grande within our American cities along the border. We just did not know that it would create vacancies because there was nothing to describe it before.

Those Americans that live along the border should have security that comes from using that land for commerce and occupation. If the greatness of our country was built on the principals of this constitution, then lets us embrace it again to built security and commerce on the US border.

We at [bordercommerce.com](http://bordercommerce.com) would like to invite you to our web site and discover what security and economic prosperity could also mean as it was meant for all Americans. We have started the discussion within a code book, what every government official operating on the border should have at their disposal to work in cooperation with the US, State, and Local government. Without a code book, how does local government protest or concur with the plans of the US government? Similarly, how does private business or citizens deal with local government in regard to codes, rules and regulations?
